DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the

manner in which the invention was made.

2. Claims 1-16 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Makoto et

al, Pat. No. JP 2003-063101 (cited by Applicant) in view of Shin, US. Pat. No. 5,886,425.

3. Claims 1-16, Makoto teaches a power supply device, comprising: a main power supply

circuit [main power supply 401] for supplying power to a main control section of a main

apparatus [main CPU 202], the main apparatus including an interface section for communicating

with an external device, the interface section having a signal detection circuit for detecting an

external signal; an auxiliary power supply circuit for supplying power to the signal detection

circuit [see Fig. 4]; and a power control section configured to control the main power supply

circuit and the auxiliary power supply circuit respectively [CPU 213], the power control section

being configured to turn the main power supply circuit off and turn the auxiliary power supply

circuit on when the main apparatus is in power saving mode, and to restart the main power

supply circuit upon the detection of external signal by the signal detection circuit [see Fig. 4 and

abstract].

Makoto fails to teach the auxiliary power supply circuit being connected to a commercial

power supply.

Shin teaches an electronic product [element 8 of Fig. 2] with standby power supply [element 7 of Fig. 2]. The standby power supply circuit being connected to a commercial power supply [see the configuration of Fig. 2].

It would have been obvious to a person of ordinary skill in the art to modify Makoto to include Shin's system, because it prevents unnecessary power consumption [see Shin, col. 1, lines 45-51].

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abdelmoniem Elamin whose telephone number is 571-2727-3674. The examiner can normally be reached on MON - THUR 10:00 AM - 6::00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Lee can be reached on 571-272-3667. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
